

### How to Make

Using the templates supplied print and cut out the pieces.

Each panel requires two pieces so double your sheet of felt over and pin template pieces to felt and cut out.

Mark and cut out the windows and glue some see-through fabric or paper to the inside. Hot glue is best or strong craft PVA.

Sew each section of the house together, (see the diagram- figure 1) sew the seams together on the outside of the house in order to form the correct shape. With the outside of the house facing you oversew along all seams joining each piece neatly to each other.

Example – the two end panels join the side panels and the roof panels are placed over the front of the side panels and sewn using a small running stitch.

Take time to neatly line up the roof seams as you sew in order to maintain the shape.

Your house is now completed, decorate the outside as you choose.

(Using a plastic battery tealight) place the house over the tealight and watch the light flicker through the windows.
